

What is claimed is:

at A1
1. A structure for mounting a rectangular liquid crystal module on a cover that covers at least one face of a body of a portable data terminal or information processing equipment, comprising:

a bottom plate which is put on the back side of a display face of the liquid crystal module;

an outside frame which is put on the side of the display face of the liquid crystal module and has an opening 10 from which the display face can be exposed;

a projected portion for fitting the liquid crystal module between the bottom plate and the outside frame, the projected portion being made in at least one of upper and lower edges of the liquid crystal so as to be projected in 15 the direction parallel to the display face;

a through-hole which is formed in the projected portion and extends through the projected portion in the thickness direction of the liquid crystal module; and

a connection portion which is formed in the bottom 20 plate and the outside frame and connects the two through the through-hole.

2. The structure for mounting the liquid crystal module according to claim 1, wherein a reinforcing member is fitted to the liquid crystal module along its edge and the 25 projected portion is formed in the reinforcing member.

3. The structure for mounting the liquid crystal module according to claim 1, wherein either one of the upper and lower edges of the liquid crystal module is sandwiched

Select

between the bottom plate and the outside frame to be fixed.

4. The structure for mounting the liquid crystal module according to claim 1, wherein the connection portion has a projected portion that is disposed at one of the bottom plate and the outside frame and fitted into the through-hole, and a connection portion that is disposed at the other of the bottom plate and the outside frame and is connected to the projected portion.

5. The structure for mounting the liquid crystal
10 module according to claim 1, comprising a screw member that
is inserted from either one of the bottom plate and the
outside frame so as to be tightened to the other.

6. A portable data terminal or information processing equipment which comprises:

15 a cover that covers at least one face of a body of
said equipment;

a rectangular liquid crystal module built in said cover; and

a mounting portion for mounting said liquid crystal

20 module on said cover,

said mounting portion comprising:

a bottom plate which is put on the back side of a display face of the liquid crystal module;

an outside frame which is put on the side of the

25 display face of the liquid crystal module and has an
opening from which the display face can be exposed;
a projected portion for fitting the liquid crystal
module between the bottom plate and the outside frame

the projected portion being made in at least one of upper and lower edges of the liquid crystal so as to be projected in the direction parallel to the display face;

a through-hole which is formed in the projected portion and extends through the projected portion in the thickness direction of the liquid crystal module; and

10 a connection portion which is formed in the bottom plate and the outside frame and connects the two through the through-hole.

7. The portable data terminal equipment according to claim 6, comprising a reinforcing member fitted to the liquid crystal module along its edge and the projected portion is formed in the reinforcing member.

8. The portable data terminal equipment according to claim 6, wherein either one of the upper and lower edges of the liquid crystal module is sandwiched between the bottom plate and the outside frame to be fixed.

20 9. The portable data terminal equipment according to claim 6, wherein said connection portion has a projected portion that is disposed at one of the bottom plate and the outside frame and fitted into the through-hole, and a connection portion that is disposed at the other of the bottom plate and the outside frame and is connected to the projected portion.

25 10. The portable data terminal equipment according to claim 6, comprising a screw member hat is inserted from

Wiley
either one of the bottom plate and the outside frame so as
to be tightened to the other.
